Seat Part Polyurethane Injection

The frame is placed in the mould and fixed by using M8 bolts. Ideal density of polyurethane compound, 756 grams of polyurethane and 444 grams isocyanate, is poured into the mould, waited on average 7 to 8 minutes to harden. When the the seat shell is sculpted to the desired shape, it is separated from the mould, cleaned, grinded with limer 80 emery to give the it a smooth surface.

Upholstery

Predefined amount of fabric is cutted in pieces by CNC Laser Fabric Cutter machines. The cutted pieces are joined via needle sewing machines at the sewing station then the seat shell is fully upholstered at the fitting station. 40 wt. thread is used for sewing, 20wt. thread is used for blind stitching on the outside of your upholstered work.
