solo x tables

design by studio deberenn

The conical base underneath gives SOLO X the appearance of floating, yet giving a stable placing towards the ground. It offers a useful support top in lounge areas, residential and contract use adding value to the whole space with its refined design. The choice among different materials and colors available for the top and base leaves the imagination free.

Top

A Solo X table is made using circular metal sheets, a central conical metal tube and an 18 mm MDF wood piece.
For the table top, 18 mm MDF is cut and then lacquered to match the style of attached furniture.

Frame

Bottom and top circular metal sheets are welded and attached to the conical metal tube creating the frame for our table.
For completion, the MDF wood top and metal frame are then drilled and attached together.
