

As designers, we believe that Cara Highline is an absolutely stunning and simple design with a touch to fulfill the trends and privacy solutions with minimal design. It answers the need for privacy in open areas with a link panel addition. You can be in a lounge space, but still, feel alone and comfortable while checking your mail or having a phone call. With its medium and high options, Highline is a perfect and comfy solution.

Make your meetings on the pod table, welcome your guests being isolated from the rest of the surrounding. For enhanced privacy, available as a unit, two or three-seat sofa both with standard and L arms, it is the ideal product for the modern working environments where personal touchdown spaces and informal meeting areas are the norms.

Wooden Carcass

Cara High carcass is made using 18 mm poplar plywood and 22.5 mm beech massive wood. CNC Router cuts poplar plywood into specific dimensioned shapes. Specific shapes are separated from the wood while straight plywood and beech wood are cut into pieces. Shaped and straight plywood and straight beech wood are glued, stapled and finally drilled together to provide a strong durable shell. Formation of arms is made using poplar plywood and beech wood while arm sides and carcass back are both covered with 4mm wood-fiber panel wood, creating a flat surface.

Foam

Elastic belts and lining fabric are aligned onto the backrest and seat to prevent foam from cutting into the wood. Seat is covered with 35 density 10 cm foam while entire back side uses 32 density 5 cm soft foam with an exception of 22 density 1 cm grey foam layered below the 32 density foam under the bottom level. Outside edges are all covered with 22 density 1 cm grey foam while top edges are covered with 2 cm HLB foam to complete a soft and comfortable seating. Carcass center and arm rests are then wrapped with synthetic fiber.

Frame

As being a member of the Cara family, same Cara legs are used in order to maintain continuity of the design. 3mm sheet metal is laser cut. Feet are then screwed to the bottom of the chair, completing a comfortable sofa. As the height of the Cara High can be changed to medium or high, it permits a wide range of use.

Upholstery

Predefined amount of fabric is cutted in pieces by CNC Laser Fabric Cutter machines. The cutted pieces are joined via needle sewing machines and upholstery is done. When upholstery process is fully completed, the arms are fitted to the body. Dust cover is stapled underneath the sofa to give the sofa a finished look.
